Is an imbalance acceptable?

Yes

Is reduced extraction during de-icing acceptable?

Yes

METHOD 1

Return air is activated and gradually increased to 30 %

Airflows (supply air and extract air) are reduced if necessary to achieve 30 % return air

The outdoor air is gradually reduced

The unit enters hibernation mode

The unit starts every two hours and monitors the situation

No

METHOD 2

Return air is activated and gradually increased to 30 % – if possible

The outdoor air is gradually reduced

The unit enters hibernation mode

The unit starts every two hours and monitors the situation

No

METHOD 3

Return air is activated and gradually increased to 30 %

Airflows (supply air and extract air) are reduced if necessary to achieve 30 % return air

The unit enters hibernation mode

The unit starts every two hours and monitors the situation
